SAVE FUEL

The World's Ultimate Logistics Advantage for Hand Trucks

HTS Lock N Roll
SYSTEMS

The **HTS Ultra-Rack Hand Truck Sentry System** streamlines the process of loading, unloading and storing a hand truck aboard commercial delivery vehicles.

The **HTS Ultra-Rack** quickly pays for itself while it increases the efficiency, the safety and the profitability of your delivery system by:

- Reducing the time of each and every delivery stop by increasing the ease of access, storage and retrieval of the hand truck, consistently reducing labor costs.
- Reducing the liability of the company resulting from hand trucks falling from delivery vehicles during transportation, reducing insurance premiums and protecting brand image.
- Reducing the likelihood of injuries to the driver due to insecure or unsafe handling and retrieval actions, thereby preventing workmen's compensation claims.
- Reducing the time lost by having to return to the previous stop to retrieve the lost or forgotten hand truck, thereby lowering fuel expenses and labor costs.
- Reducing the damage to packages and other fragile merchandise due to loose hand trucks bouncing around inside the cargo area, lowering insurance claims and preventing vehicle body damage.
- Reducing the chance of hand truck and merchandise theft from unattended or unlocked delivery vehicles, provides an excellent theft deterrent and increases cargo space.

The HTS uses a Dash Release switch that includes an LED indicator and audio alarm to warn the driver if the system is not properly locked and to verify the hand truck is safely aboard the vehicle before departure. Release the hand truck using the Dash Release switch or the manual override key on the Hand Truck Sentry frame. To learn more about our HTS Ultra Rack products, please visit our web site at:
